1)Tell Me about yourself?

==================

Hello sir, I'm Md Arfan Khan, A Junior web Developer. I have been learning programming for almost 2 years as self thought learner. I'm so much passionate about learning code. As a self learner it was not an easy task for me to Learn code alone. I have faced so many problems durning my learning time as I was not aware of any guidelines but I never give up. Sometimes I felt that coding may be not for mine. But in a very next moments I told myself that If others can do then I also can do it. From then for any problems i have faced i asked google for the solution. And day by day Problem solving became a great challenge. I took any problems as a challenge and I solved it with a pleasure mind as google was with me to help.

When I started programming, my first programming language was php. I have cleared my programming fundamental knowledge from it. But after some months i move into javascript as it is the only language that can works both Front-end and backed end. And also, a web developer there is no way to avoid javascript because most of the library and framework are built on javascript. I have built some project with row javascript and dom knowledge. Currently I'm learning React Js.and my next 2 years goal is to be a good developer on mern stack as it has a great demand now a days. I have built some great project on react Js and now I am so much confident on working with react js. Besides that, i have also great knowledge on some Advance CSS staff and I can make any website with perfect responsive. Currently I'm fully focusing on my learning and gathering experience. if i get a chance to serve my current knowledge for any Company then lt will be a great opportunity for me. i can gather so much experience and can learn so much advance staff working with them.

2)What is YOUR best project?

==

Recently i have build some project on React Js with firebase authentication, admin User role management functionality, dashboard functionality, react routine systems and with many more things. Some of them I have include backed staff also.

And the best project of them was my product management systems project based on Front end react Js and I have also included some basic backed node js functionalities. In that project for Front end part i have used react Router v6 with nested route and private route for proper routing system. I also included react query for fetching data from backend api. Besides I also included Firebased authentication with user verification confirmed.for Proper form validation React Hook form with yup package has been used. A user has to login for order products. Without login no one can order products. Also, user can pay for there orders with stripe payment methods.an Admin can manage user from dashboaed.

For backed end i have include some basic crud rest api with express mongodb for order, product, user etc. I have also included jwt token for real user verification. Nodemailer packes used for giving user an email for an order successful.it was a great challenging project for me as a beginner and I have learned so much things form this project and now i'm so much confident on doing any project and I have the confident of solving the project issue form google.

3)Why should we hire you?

===

I should be hire because I knew almost every skill required for this job post. And i have also made some good projects based in these skills. besides I'm passionate learner to learn new skills. I took any task as a challenge and without solving that i never clam down. I also try to maintain an inspiration and Cooperative behaviour with everyone.

4)What is your expected sellary?

==

Although I am now fully focused on enhancing my skills and experience, but there is quota that money is the biggest motivation for anything. And a good sellery will definitely increase my learning motivation as a reward. most of us work hard for getting a comfortable life. And money is very important to make a beautiful life. But at present I can't decide the amount of it as a fresher. But if you become satisfied with my work then, I can expect the salary accordingly. If you don't mind, can I know what is the highest salary of this post?

5)Do you have any question for us?

===

I have two questions for you.

1)Is there any learning opportunity for a fresher.

2)Do you give any festival bonus to your employees.
